

MOSQUITO MAGNET®

Product Portfolio: PRO

- Protection for estate lawns, golf courses, commercial applications
Up to 4046 square meters
- Built from industrial strength metal and plastics; all-weather performance
- Self-powered; no additional power source
- Silent and odorless; 24 hour protection

MOSQUITO MAGNET[®]

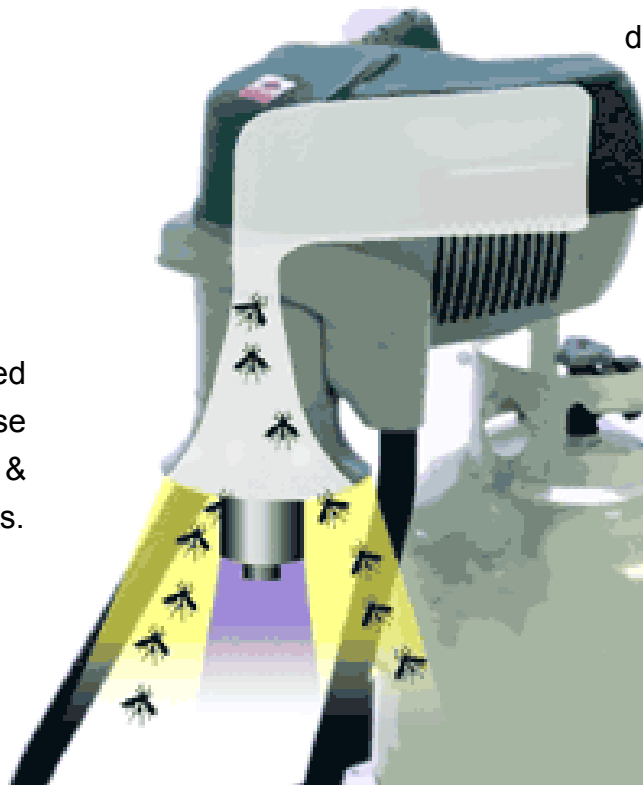

How the Trap Works

Step 3

As the blood seeking insect approaches the CO₂ plume, they are caught in the vacuum of the tube.

Step 2

CounterFlow™, another patented technology, emits the precise amount of CO₂, heat, moisture & Octenol to attract the biting insects.

Step 4

The biting insects are vacuumed into a net where they dehydrate and die within 24 hours.

Step 1

A patented process converts propane to carbon dioxide (CO₂).
